

Replacement Hasselblad 2000 Shutters

Hi tech polymer shutters to replace fragile ribbed titanium:-

And after....

So, why use Medium format in a digital age?

- Producing test charts and equipment for 4k digital Cinema and HD television testing, means that we need pictures more than twice as good in overall resolution as a 35mm full frame 20M pixel digital camera can produce.
- Large area sensors allow the use of optically large lenses and hence short depths of field. Unfortunately, single-crystal silicon detectors are economically limited to sizes well below 6 x 6 cm, but negative scanners are not.
- Square formats often allow the use of wide angle lenses without distortion caused by tilting the camera.

Why the Hasselblad 2000 series?

- In order to use the excellent and plentiful F and FE series of Zeiss and Hasselblad lenses.

And finally, how come BPR?

- A spin off from our HD testing programme, and Space sensor technology.

.....

- **Price Guide:-** Exchange shutter rollers from GBP 42*, Full body service and test from GBP170*
- **Guaranteed overhauled used bodies, lenses and accessories often available from stock*.**
